Fuelling the future

RESOURCECO

TOMORROW'S SOLUTIONS. TODAY

Rather than burying your waste in landfill for future generations to face, you can recover its potential energy today through ResourceCo and help protect our planet for tomorrow.

ResourceCo provides smart environmental solutions.

Our philosophy is simple. Discarded materials are not waste but a valuable resource that together, we can recover and transform into practical products. Reusing and recycling materials conserves our country's finite natural resources, provides jobs and helps to protect the environment.

Why partner with ResourceCo?

Partnering with ResourceCo enables your business to show responsible environmental management, meet waste reduction targets and boost your green credentials with your customers and local community.

Suitable materials for recycling come from diverse sources. These include residential hard waste, manufacturing, retail, government and education facilities, residuals from recycling facilities as well as some specific construction and demolition waste streams.

By directing these waste materials to ResourceCo, your business can reduce waste sent to landfill and help to create a product that lessens our dependence on non-renewable fossil fuels.

Fuelling the future

ResourceCo is a recognised Australian leader in the development of alternative fuels made from recovered resources.

We manufacture process engineered fuel (PEF) from residential hard waste, commercial and industrial (C&I), residuals from recycling and certain construction and demolition (C&D) materials. These typically include but are not limited to non-recyclable plastics, cardboard, paper and textiles as well as certain difficult to recycle waste timber materials.

Our State-of-the Art Wetherill Park plant will replicate the production capabilities of our South Australian plant. Initially the plant will sort and separate all incoming materials, then recover any non-combustibles, such as metals and aggregates, for processing for re-use. The prime combustible materials will be used to produce PEF. The facility will convert up to 250,000 tonnes of raw material waste into approximately 150,000 tonnes of eco-friendly fuel each year, and recover other commodities such as metal, clean timber and inert materials.

In total, we recover more than 90% of all incoming materials that would otherwise be sent landfill.

Put simply, diverting waste from landfill makes environmental sense!

DID YOU KNOW?

In New South Wales, over 2 million tonnes of the materials disposed to landfill is C&I waste. Much of this waste can be avoided by reuse, re-sale or reprocessing of materials.

Source - NSW Waste Avoidance and Recovery Strategy 2014 - 2021 - State of NSW Environment Protection Authority (note figures are from the 2010-11 financial year)

Our service provides a point of difference for you and your customers.

Benefiting the local industry and the economy

The ResourceCo facility in Wetherill Park is contracted to supply PEF to major local and international cement kilns. This in turn will reduce their non-renewable fossil fuel usage significantly.

PEF is a viable alternative to fossil fuels and improves environmental outcomes by reducing greenhouse gas production per tonne of cement produced.

In addition, our alternative fuel complies with the requirements of the Australian Governments Clean Energy Regulator under the emissions Reduction fund.

We can guarantee that our customers' waste is diverted from landfill, in turn reducing the associated harmful greenhouse gas emissions from landfill, notably methane, which contributes significantly to global warming.

Want to know more?

Partnering with ResourceCo benefits business, industry, the economy and our environment.
