Energy for the future

TOMORROW'S SOLUTIONS. TODAY

Reduce your energy costs and environmental impact through a ResourceCo alternative energy solution.

Australian industry is facing significantly higher gas and electricity bills. At the same time, the waste sector is looking for better and more environmentally friendly solutions.

As the Australian leader in alternative fuels made from recovered resources, ResourceCo is uniquely placed to provide a lower cost, renewable, long-term energy solution for Australian manufacturing and high-energy users.

Our philosophy is simple. Discarded materials are not waste but a valuable resource that together, we can recover and transform into practical solutions. Doing this conserves our country's finite natural resources, provides jobs and delivers cost effective solutions for energy users.

Fueling the future

We manufacture process engineered fuel (PEF) from non-recyclable commercial and industrial (C&I) and construction and demolition (C&D) waste streams. These typically include but are not limited to non-recyclable plastics, cardboard, paper and textiles as well as certain difficult to recycle waste timber materials.

Our state of the art plants recover more than 90% of all incoming materials that would otherwise be sent to landfill. Put simply, diverting waste from landfill makes environmental sense!

Proven Technology

Whether replacing gas, coal or electricity, there are proven technologies available today to use ResourceCo fuels to reduce energy costs for Australian businesses. There are hundreds of plants throughout Europe using waste derived fuel for heat and electricity.

How does it work

Large energy users will be provided with lower cost, renewable heat or electricity under a long term agreement. ResourceCo will fund, build, own and operate the energy plant, taking this risk and capital cost away from the user.

Alternatively, ResourceCo can provide the fuel only under a long term agreement should the energy user wish to own the energy plant.

Why partner with ResourceCo?

Partnering with ResourceCo enables your business to reduce costs, show responsible environmental management and boost your green credentials with your customers and local community.

ResourceCo is the leading provider of alternative waste fuels in Australia and is one of Australia's largest recycling businesses, accepting and processing over two million tonnes of waste per annum.

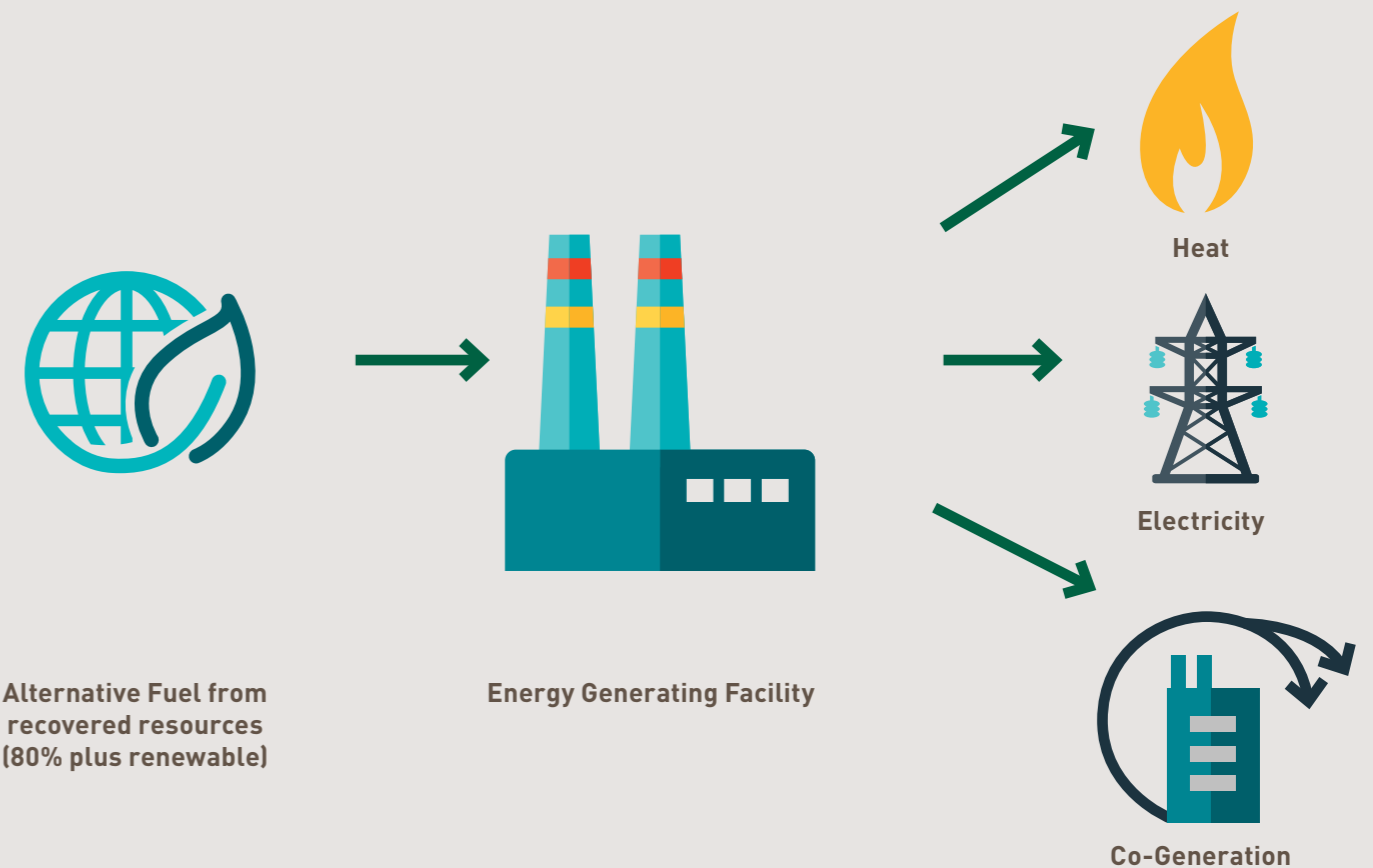

ResourceCo has been operating alternative fuel plants for over 10 years working with major companies including Adelaide Brighton Cement, SUEZ, Cleanaway and Boral, and recently received finance from the Clean Energy Finance Corporation.

ResourceCo commenced operations as a concrete crushing business in 1992 with one employee; today the business employs over 700 skilled staff in 24 locations nationally and offshore.

Benefiting the local industry and the economy

PEF is a viable, cost effective alternative to fossil fuels and improves environmental outcomes by reducing greenhouse gas production. In addition, our alternative fuel complies with the requirements of the Australian Governments Clean Energy Regulator under the Emissions Reduction fund.

Our service provides a smarter way to run your business.

DID YOU KNOW?

The manufacturing sector uses approximately 390PJ of gas for heat each year. This is the same amount of energy as the electricity used in 16 million Australian households each year.
